STOCKS TO MONITOR

... FOR THE SHORT-TERM INVESTORS

MARCH 19 - 23, 2018
The stock came third place on the top 10 weekly gainers’ list for the previous week, following an advancement of 11.57% to NGN2.70 during the period.

The Relative Strength Index (RSI) at 75.2 reveals that the counter currently trades deep in the overbought region. In addition, the Moving Average Convergence Divergence (MACD) shows a decline in positive sentiments on the counter.

*We expect to witness profit-taking on the counter this week.*
Bearish sentiments were witnessed on this counter last week, causing its price to decline by 15.48% to NGN20.02.

An analysis of some of the technical indicators on the stock suggests that negative sentiments will continue to hover in the near term.

*Although we expect further price shedding during the week, we anticipate bargain hunting activities on the counter in the near term.*

The stock topped the weekly gainers’ list to close at NGN0.48. However, it has a negative Year-to-Date (Y-t-D) return at -4.00%.
The candlestick shows a return of bearish sentiments on the counter while the MACD indicates a decline in positive momentum.

*We expect more sell-offs on the counter during the week.*

**ZENITHBANK**

Following the release of its FY2017 results, selling pressures were witnessed on the counter. Consequently, the stock shed 10.68% in the prior week to close at NGN27.6.

The RSI at 24.91 suggests that the counter is oversold with possibilities of a reversal this week.

*We expect bargain hunters to take position on the counter during the week.*
Technical Indicators Used

Moving Average Convergence Divergence (MACD): It shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. (Source: Investopedia)

Relative Strength Index (RSI): It is a technical indicator used in the analysis of financial markets. It is intended to chart the current and historical strength or weakness of a stock or market based on the closing prices of a recent trading period. The indicator should not be confused with relative strength. (Source: Wikipedia)

Bollinger Bands: Bollinger Bands are a volatility indicator similar to the Keltner channel. Bollinger Bands consist of an N-period moving average (MA) an upper band, UBB at K times an N-period standard deviation above the moving average (MA + Kσ) a lower band, LBB at K times an N-period standard deviation below the moving average (MA – Kσ). Candle sticks: A candlestick chart (also called Japanese candlestick chart) is a style of financial chart used to describe price movements of a security, derivative, or currency. Each "candlestick" typically shows one day; so for example a one-month chart may show the 20 trading days as 20 "candlesticks". (Source: Wikipedia)
Fair Value Estimate

In arriving at our fair value estimate, our analyst(s) utilised a blend of valuation methodologies such as; the Discounted Cash Flow (DCF), Residual Income (RI) and Dividend Discount and Relative Multiples methodologies. Consequently, a weighted average price is obtained based on specific company characteristics, industry standards and the broader economy.

Investment Ratings

BUY: We expect a total return of over 20% within the next twelve months on the counter.

ACCUMULATE: We expect a total return of between 10% and 20% within the next twelve months on the counter.

HOLD: We expect a total return less than 10% within the next twelve months on the counter.

REDUCE: We expect a total return less than or equal to 0% within the next twelve months on the counter.

SELL: We advise clients to sell the stock as it trades at a premium to its intrinsic value.
